obagi (*skin rejuvenation*)

When considering cosmetic surgery, it is important that you are fully informed on all aspects of the procedure that you are seeking.

When Cosmetics simply are no longer enough...

Obagi offers a new clinical approach to healthy rejuvenated skin - available only from medical aesthetic clinics to properly treat damaged and ageing skin.

Skin ageing is a progressive process influenced by the sun, stress, the environment, hormonal changes and time. It is damage that no shop-bought cosmetic can treat! To restore beautiful skin, treatments must address the cause of the problems and not just the symptoms. Unlike cosmetics, Obagi's medical products work at the cellular level of the skin deep down where the appearance and ageing of skin is determined...

The Nu-Derm Programme and Blue Peel are suitable for both men and women and although new in the UK, the products have been used with impressive results in the USA for 10 years.

- Obagi's products help to diminish fine lines and wrinkles, reduce age spots, sun damage, hyper pigmentation and pore size, improve elasticity and normalize oil production and natural hydration.
- Sun Exposure and ageing.
- Use of protocols for five months, with a single Blue Peel, visibly reduced fine lines and wrinkles and increased skin tightness.
- Age spots, wrinkles and general skin laxity.
- Use of Obagi protocols for five months and a Blue Peel, restored younger looking, healthier skin.
- Acne vulgaris, oily skin and large pores.
- Obagi protocols alone improved the skin's appearance and clarity in just five months.
- Freckles, age spots and sun damage.
- After using protocols for five months and having two Blue Peels, the appearance and texture of skin is remarkably improved.

The Obagi Blue Peel is a light TCA chemical peel - a safe and controlled medical procedure that can be performed on the face and other areas such as the neck, chest, hands, back and arms. Everyday skin accumulates dead skin cells on its surface making it look dull, dry and aged. This damaged skin hinders the natural functions of the skin - elimination, moisturising and cooling and when skin is malfunctioning we see a blemished complexion. The Blue Peel safely and scientifically sheds this damaged skin to reveal beautiful and healthy skin.

Profile

cosmetic surgery

Obagi Nu-Derm is an integrated system of prescriptive creams and lotions that can enhance the results of the Blue Peel and other aesthetic procedures. Alternatively, Nu-Derm can be used as a stand-alone option for skin rejuvenation. Nu-Derm penetrates deep into the skin to stimulate skin cell renewal, improve circulation and help rebuild collagen. The normal barrier function of the skin is restored making the skin less sensitive and better able to hydrate properly. After 6 weeks, new skin cells begin to emerge to the surface to create young and fresh skin.
